Instructions: Open Docucare to (insert patient name), complete the questions below and bring this form with you to simulation. This is your “ticket” to get in the door.

Review all information in the chart and focus on the following:

1. Labs including Basic Metabolic Panel
2. MD orders
3. Medications
4. Respiratory assessments especially oxygenation

Questions:

1. Why is this patient at risk for poor oxygenation?

2. Which conditions and medications might contribute to the patient’s poor oxygenation?

3. What nursing interventions would be most helpful for this client?

4. From the EMR MAR list the patient medications that are linked to the diagnosis and tell the action of each medication.

5. Make a list of actions the nurse can expect to take while caring for this client.
